

Migrating to Windows 7? Rolling out of new computers?

U-Win is a comprehensive, end-to-end Windows migration solution that reduces the cost and complexity associated with migration. It allows you to perform quick, enterprise-wide backups and unattended clean migrations of user data and settings for heterogeneous systems from a single console.

U-Win performs the actual migration, deploys applications, and restores user settings. This promotes standardization and business continuity for a secure, reliable network. This platform-independent program accommodates all of your hardware, software, and user requirements. Whether you are replacing desktops with new hardware or doing an end-to-end migration to Windows 7 from XP or Vista, we have the right solution for you.

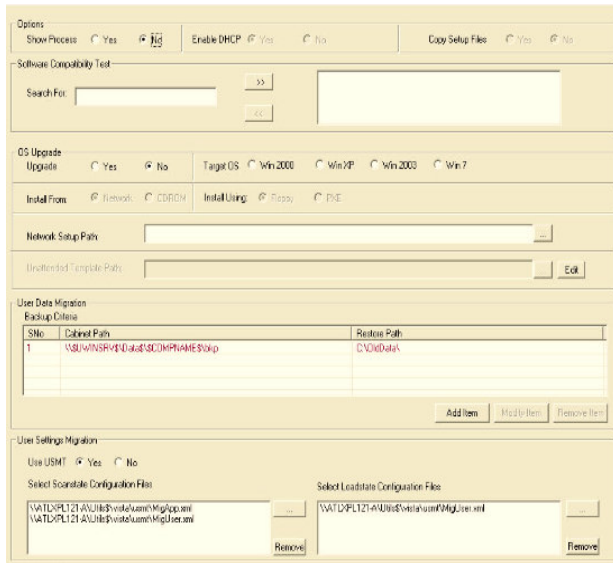

U-Win includes asset inventory, pre-qualification, advanced user data backup, O/S installation, settings migration, and application deployment.

BOSS Migration Strategy

- Assess the current environment using award winning DiagWin software
- Determine customer needs via user interview using BOSS Survey
- Prepare migration success plan with your team
- Backup user data and settings securely
- Perform the actual migration using U-Win
- Package and Deploy applications
- Restore user data and settings
- Review the migration results and implement a process for continuous support

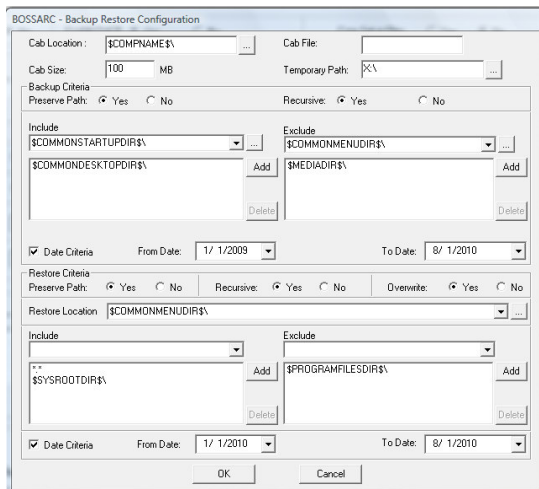

U-Win has in-built integration for USMT, WAIK tools provided by Microsoft and we have simplified the configuration process. U-Win significantly expedites Windows migration and eliminates much of the post-migration support that consumes your precious time and resources.

U-win template interface – easy to use & intuitive

- Migration & Hardware Refresh Services
- No loss of data
- No productivity loss – automated process carried out after hours
- Upgrade laptops/desktops ensuring full user satisfaction
- Standardized environment – increased user productivity
- Fixed price solution by number of PCs based on needs

U-Win data backup interface – highly flexible

- Selective user data backup & restore
- Backup based on user needs & preferences
- Restore user data with multiple options
- Restore user data, preferences and applications in case of user computer failure

‘U-Win makes our heterogeneous hardware refresh easy with the ability to create generic templates that are not hardware dependent and also the ability to push custom applications as part of the o/s deployment makes it a great choice’ - Floyd Medical Center, GA
